## 2010 MICHIGAN FEDERAL & STATE CANDIDATE QUESTIONNAIRE

Please circle the answer which best indicates your position for each question.  
Your answers will be reported to M.O.M. members in your district. Thank you for your participation.

- 1) Michigan is one of eighteen states that allow a philosophical exemption to vaccinations for children entering daycare and school. Our members have expressed how grateful they are to live in a state where parents can still make the decision whether or not to vaccinate their children. They know how precious health care rights are, and want to know who in the legislature they can count on to preserve their rights.

I support an individual's/parent's right to make vaccine decisions for themselves and their children:

Yes  No  Undecided

- 2) Even though a majority of Americans opposed it, Congress passed the "America's Affordable Healthcare Choice Act of 2009" in March 2010. Mandating health insurance & fining the uninsured; requiring electronic records; setting up over one hundred government committees & boards to determine the kinds of medical services that will be allowed; outlawing out-of-pocket payment of non-covered treatments and eventual elimination of Health Savings Accounts are just a few of this legislation's objectives.

In response to the passage of this massive healthcare takeover, Michigan, like many other states, has filed lawsuits against it and organizations have started petition drives to opt out of it.

I believe individuals should not be forced to buy medical/health insurance and be free to purchase the medical/health services and products, if any, they wish to use:

Yes  No  Undecided

- 2) There have never been any large, long term studies like those for heart disease or breast cancer to investigate the reported links between vaccination and **autism, asthma, diabetes, chronic ear infections, arthritis, Crohn's disease, multiple sclerosis, learning disabilities, attention deficit disorder, cancer, chronic fatigue, Gulf War-associated illness and other immune and neurological dysfunction**. With regard to vaccine policy and programs, appropriated money is spent on vaccine development and mandatory vaccinations. To avoid a continued conflict of interest, the studies necessary to determine if vaccine policies, designed to control acute infectious diseases, are also causing chronic disease must be conducted by independent researchers.

I would support independent basic scientific research on the link between vaccination and chronic disease:

Yes  No  Undecided

Candidate's Name: Rich Olson District #: 55 Date: 6/8/10

**Please return this questionnaire in the pre-addressed, stamped envelope by July 7, 2010**
